

# Parameter Wizard

Current Release Version: 2.1

## **Make your interfaces more flexible!**

You can use a parameter file to define the values for parameters and variables used in a workflow, worklet or session. If you declare parameters and variables, you can reuse an interface by altering the parameter and variable values. This can reduce the overhead of creating multiple interfaces when only certain attributes of an interface need to be changed.

Parameter Wizard guides you through the steps to create a parameter file for Informatica PowerCenter™.

## **Features**

### **Usability**

Easy to use wizard application. Every step takes only a few clicks. Drag 'n' drop support. Open/save parameter file with wizard.

### **Parameter File**

Service Variable, Service Process Variable, Workflow Variables, Worklet Variables, Session Parameters, Mapping Parameters and Variables, Mapplet Parameters and Variables.

### **Editor**

Feature-rich editor providing Unicode support, syntax highlighting, parameter type reference and examples, Find/Replace and Go To Line dialog, Undo/Redo function, advanced edit functions (convert characters, change case, transpose, etc.), WYSIWYG printing, and more!

### **Preview**

Summary of specified settings and options. Preview of parameter file.

### **Output**

Save output to file.

### **Help**

Help for common tasks.

### **Services**

1 year maintenance and premium support.

## **Requirements**

- Intel Pentium 3, 500 MHz or equivalent
- Microsoft Windows 2000/XP/Vista/7
- Microsoft .NET framework (2.0)
- 256 MB RAM
- 10 MB free hard disk space
